AI Medication Safety Report

Report ID:	MED-20260709-E28B
Generated:	09 Jul 2026 16:48
Version:	1.0
Analysis Engine:	MediTrace AI
Evidence Sources:	RxNav + OpenFDA

Executive Summary

Total Medications	2
Interactions Checked	1
Major Risks	1
Moderate Risks	0
Safe Pairs	0
Overall Assessment	High Risk
Recommendation: Consult your healthcare provider before combining these medicines. Immediate attention may be required.	

Patient Medications

- Metformin
- Ibuprofen

Interaction Details

Drug Pair

Metformin & Ibuprofen

Severity

Major Risk

Evidence Source

OpenFDA

Confidence Level

Medium

Explanation

OpenFDA serious reaction keyword detected: kidney.

Top Reported Adverse Events

- Acute Kidney Injury
- Nausea
- Chronic Kidney Disease

Recommended Action

Please consult your doctor due to potential severe risks.

Clinical Summary

The concurrent use of Metformin and Ibuprofen is clinically concerning due to severe adverse events reported in OpenFDA and RxNav. Available evidence indicates this combination may lead to acute complications requiring medical oversight. The patient must immediately consult their healthcare provider to evaluate safer pharmacological alternatives.

Medical Disclaimer

This report summarizes publicly available drug safety information from OpenFDA and RxNav.

OpenFDA adverse event reports do not prove that a medication combination caused the reported event.

Always consult a qualified healthcare professional before starting, stopping, or combining medications.
